

Description:

All hydraulic means easy maintenance no downtime and the most efficient use of your horsepower to get the job done. Moreover weight balance stability and tine speed allow this tiller to work where others can't. In addition the open design allows for easy access to the hydraulics when maintaining or repairing. The heavy design means your tiller works for you instead of tossing you around. As a result counter rotating tines break up the most difficult soil clay or sod. The tine drive motor is directly mounted to the tine shaft resulting in a system so durable the original tiller was rented out for more than 20 years. The wheel drive and tine drive work independently of each other to allow your tilling travel speed to be adjusted to the soil conditions.

The operator friendly controls couldn't be easier: one handle to set the tine drive and one to adjust the wheel drive. Engage the clutch lever use the variable speed drive to adjust the ground speed and engage the tines when you are ready to till. If you need to stop for a moment drop the clutch and the tines and wheels will stop leaving your engine running and ready to pick up where you left off.

With no belts chains or gears to mess with maintenance is minimal. Also the hydraulic motor is recessed outside the frame for easy accessibility and removal. In addition moving parts are protected by shields and plates. Pressure relief valves prevent damage when tines are blocked reducing the chance of costly repairs. By choosing hydraulics you'll increase your utilization and minimize maintenance costs improving your bottom line because tiller that sits down produces no revenue.

Product Code: BAR1320

Specification:

-
-
-
-
-
-
-
-
- Noise Level: 92dbA
- Dimensions: 195 x 68 x 111 cm (LxWxH)
- Weight: 255kg
